

Organic salmon farming:

- Cage density of 10-12 kg per M³ of water
- Certified organic fishmeal based on formulations and oils derived exclusively from wild fish trimmings and certified organic vitamins and minerals
- Humane welfare and harvesting methods
- Strict control of the marine environment and all material used on site

.... these factors guarantee organic salmon

Traceability of organic salmon:

- Certified and controlled on site by the organic certification authorities
- Certified in France for distribution by ECOCERT

Oceanord's organic salmon satisfies the expectations of the marketplace
